

Heat tolerance

Heat Tolerance

Titan Rx can take the heat! In 2010, Georgia had record-setting summertime heat, and by December of that year the differences were clearly visible. At the National Turfgrass Evaluation (NTEP) site in Griffin, GA, a number of well known varieties simply could not take the enduring heat. Titan Rx was **one of the few** in the field of 113 trial entries that **maintained a high plant counts and good density**.

Even into the next summer, the damaged varieties could not recover fully. **Titan Rx shows the value of heat tolerance.**
