## Perfect For New & Overseeding Existing Lawns!

### Starting A New Lawn/Repairing Bare Spots

**Ideal Planting Time:** The best time to plant is late summer, early fall, or spring. If seeding at other times, be prepared to touch up thin or bare spots as needed.

**Seedbed Preparation:** Till the soil approximately 6 inches deep. Level with garden or landscaping rake. Surface may be firmed by rolling or soaking, then re-raking till level. Leave top ½ inch loose to allow seed to be worked into soil.

**Fertilization:** Prior to or right after seeding, apply a starter fertilizer to help proper root development. Continue using a systematic fertilizer program to maintain a healthy lawn.

**Seeding:** Sow seeds evenly at 7–10 pounds per 1,000 square feet. Rake lightly into soil. No more than 1/8 inch of soil should cover seed. Roll with a water roller.

**Covering:** Use blankets, pelletized or paper mulch, or straw to hold soil moisture and hasten germination. Baled straw may bring in unwanted weeds; use with caution.

**Watering:** Do not allow soil to dry out. Keep soil moist with frequent light watering until seedlings are visible. After lawn is established, water as necessary.

### Overseeding An Existing Lawn

**Lawn Preparation:** Mow lawn to 1 inch and remove clippings. Dethatch with a power rake or hand rake smaller areas.

**Seeding:** Sow seed evenly at 4–6 pounds per 1,000 square feet. Work seed into existing turf by raking.

**Watering:** Keep soil moist with frequent, light watering until grass is established.

**Mowing:** Follow normal mowing practices when grass reaches 3 to 4 inches in height.

### Maintaining Your T.L.C. Lawn

**Mowing:** Maintain mower height between 2 to 3 inches, never remove more than 1/3 of the grass plant with each mowing.

**Weed Control:** It is very common to see new weeds when planting a new lawn or disturbing the soil. For new lawns, wait 6–8 weeks before using any herbicide. For existing lawns, the best weed control is to maintain a healthy lawn by regular fertilization, proper mowing, and watering as often as necessary.

### Recommended Seeding Rates

New Lawns: 7 to 10 lbs per 1000 square feet

Overseeding: 4 to 6 lbs per 1000 square feet
